“They helped me  
with waterfall glares,  
dark forest shadows,  
and skyline.”

—Andrew N.

## Rise over your photo troubles

As new greenery emerges, changes colors, and falls, so do photography opportunities. We can capture the transition from grays and browns to a rainbow from ground to canopy.

So, are you prepared to capture the natural wonders of the Ozark Mountains?

**Every season is a time for technical challenges.**

When the light changes, your camera setting needs to change. Aperture,

# NWA Outdoor Photo

**Your local Ozark photography solution now with courses for seasonal challenges.**

# Unpredictable Lighting

shutter speed, ISO, lens, and other equipment choices hinge on lighting.

When plants bud and bloom, the lighting changes. An open forest floor will get shadowed by plump honeysuckle bushes, small dogwood trees, and crowning oaks.

Rocks, rivers, and waterfalls reflect lots of light. But in a forest, you cope with the high contrast of reflecting sunlight and the dark understory.

Not being prepared to meet these challenges can ruin a series of photos and your whole outdoor trip.

It's like going for a hike expecting good weather, but it quickly turns on you. Your clothing isn't fit for the wind, rain, or temperature. Hiking can take longer or force you to head back early and make you miserable.

Making good photography choices is like the perfect hike. You know what supplies suit the location and how to scout the best sites and subjects. You plan for weather and its changes.

**The Ozarks pack too many visual wonders for you to miss out.**

Here are some of the playgrounds for well-crafted photos you could take:

- Summer landscapes of deep green forests flanked by swaying rivers and bold bluffs.
- Autumns have some of the best foliage in the country. Thank our red maples, golden hickories, and late-changing green oaks.
- Winter creativity exercises with shape and contrast. Bare trees cast silhouettes against the sky and lakes. Lichen, rock, and fallen leaf textures become more prominent.

...for every season

- Spring flows with color. It goes from pink dribbles and purple flowers to yellows, whites, and reds as the trees take more space that captures the sun's rays.

Once more, I ask, "Are you prepared to capture the natural wonders of the Ozark Mountains?"

"I know the concepts, but used to struggle on location. No longer."

-Shawn K.

"I could read articles and watch videos online, but nothing can replace in-person instruction and professionals who know the local nature."

-Laura T.
